DRAFT EC sequential sampling prelim data memo FinalLeadOnly - with CRLdup.docx

Chris: There are 6 homes for which we will have Final CRL and Final SRS lead data. The highlighted language below will go into those 6 respective letters explaining that a small difference numbers is not unusual.

Importance: High

Tom - I am working through the Lead-Only final data now, and I just found that we WILL have some sites where we have **both Final Lead from CRL and Final Lead from STAT/SRS**. We may want to include some additional language for these sites, for example:

- As part of U.S. EPA's review of the results, the MM/DD/YYYY samples were analyzed a second time by a separate laboratory; these results are presented in the row labeled "Duplicate". You may notice slight differences between the numbers reported by the two different

laboratories; these slight differences are common when water samples are analyzed by different instruments.

Thanks,

Val
